

Time Savings Table — Onboarding Steps 1–7

Wealth Management Client Onboarding — AI Opportunity Assessment · Updated October 2026

Step	AI Tool	What It Does	Pilot Cost	Est. Advisor Time Savings	Est. Client Time Savings	Est. Days Saved on Full Onboarding
1. Prospect Discovery <i>Low Priority · Composite 2.90</i>	Avoma AI Meeting Assistant AI meeting notetaker	Transcribes prospect discovery calls; extracts and classifies client goals, concerns, preferences, and follow-up items; can push structured notes to CRM.	\$0 14-day trial \$19–\$29 /user/mo production	~15 min/client (~50% of a ~30-min manual note-writing task); advisor still validates output before CRM entry	~5–10 min/client — fewer clarifying follow-up calls	~0 days — labor-time savings only; step has no rework/waiting loop, so it doesn't compress the onboarding calendar
2. KYC / AML Verification <i>Near-Term · Composite 3.20</i>	Jumio KYX Platform ID verification & screening	Automates government-ID/document verification, biometric face matching, and AML/OFAC/PEP/adverse-media screening.	~\$6K–\$25K pilot (low-volume tier, ~5K–15K verifications/yr)	~35–50 min/client (~80–90% reduction in manual document review/screening, per Jumio/Socure/Onfido case studies); compliance still reviews exceptions and EDD hits	~15–25 min/client — fewer repeat requests for ID, proof-of-address, and source-of-funds documents	~1–2 business days — fewer round-trips collecting/re-collecting KYC documents (KYC + account opening consume 40%+ of onboarding time per McKinsey)
3. Suitability & Risk Assessment <i>Near-Term · Composite 3.10</i>	Nitrogen Risk Assessment Platform Risk profiling	Standardizes risk-tolerance scoring, flags inconsistent or incomplete responses, and produces a structured risk profile for advisor review.	~\$2.4K–\$6K /yr per seat (published Risk Center/Complete Bundle pricing); custom broker-dealer/enterprise pricing available	~8–10 min/client (~30–35%) — documentation/consistency checking is automated, but the suitability determination itself (FINRA Rule 2111) still requires advisor judgment and is not reduced	~10–15 min/client — fewer callbacks to resolve incomplete or inconsistent questionnaire answers	~0–0.5 days — a small reduction in callback cycles; step does not sit on a major rework loop
4. Account Setup & Documentation <i>Near-Term · Composite 3.95 (highest)</i>	Docupace Digital Account Opening Document assembly / NIGO check	Pre-populates account forms, manages e-signature workflows, and validates paperwork to flag NIGO issues before custodian submission.	Custom quote no published pricing; vendor-led pilot, typically scoped to a limited account volume	~45–70 min/client — mostly rework avoidance; 60–80% NIGO reduction (Docupace/Laser App case studies) removes most correction cycles	~20–40 min/client — fewer re-signature and resubmission requests	~2–5 business days — removes the industry-average NIGO correction cycle (15–30% NIGO rate, Cerulli/Docupace/DST); the single largest cycle-time driver in the matrix (Process Friction score 5/5)
5. IPS & Portfolio Mandate <i>Near-Term · Composite 3.10</i>	eMoney Advisor AI-assisted planning docs	Uses validated goals, risk data, and planning assumptions to assist with IPS drafting, documentation, and template assembly.	Contact vendor no published list price; one reported real-world example ~\$379/mo per advisor (Capterra user review)	~25–30 min/client (~50–55%) — template assembly/data population automated; investment-policy language and rationale remain advisor-authored	~5–10 min/client — fewer review/re-approval rounds	~0.5–1 business day — fewer drafting cycles before the IPS is ready for sign-off

Step	AI Tool	What It Does	Pilot Cost	Est. Advisor Time Savings	Est. Client Time Savings	Est. Days Saved on Full Onboarding
6. Portfolio Construction & Funding <i>Low Priority (override) · Composite 3.25</i>	Orion Advisor Technology Model mapping / trade prep	Supports model-portfolio mapping, portfolio analysis, and trade-ticket preparation after the advisor approves the recommendation.	~\$13K–\$28K /yr (published Foundation–Advantage stack tiers)	~15–20 min/client — execution mechanics and model-mapping only; the investment recommendation itself is not automated (Reg BI / fiduciary duty)	~0–15 min/client — minimal direct involvement once the advisor approves the recommendation	~0.5–1 business day — faster funding/implementation once approved; the recommendation step itself is not compressed
7. Welcome & Ongoing Service <i>Quick Win · Composite 4.30 (highest)</i>	Salesforce FSC + Agentforce CRM / workflow automation	Automates CRM record creation, welcome communications, follow-up tasks, and recurring service workflows from completed onboarding data.	~\$500–\$1,500 limited PoC, excl. implementation; production licensing \$325–\$750/user/mo (Salesforce list pricing, Agentforce editions higher)	~20–25 min/client, recurring for every client — fully rule-based (feasibility 5/5), the highest-frequency step in the process	~5–15 min/client — welcome communications and account access arrive immediately instead of waiting on manual staff follow-up	~1–2 business days — automated welcome/CRM/service setup fires immediately rather than queuing behind manual staff follow-up
Combined Impact all 7 steps	AI-Augmented Onboarding	Multiple point tools working across the onboarding lifecycle; pilot costs and vendor stack vary by scope.	Varies by scope	~2.75–3.75 hrs/client	~1–2.25 hrs/client	~5–11.5 business days sum of per-step ranges, rounded; steps run largely sequentially per the process narrative, so savings are additive rather than compressed — driven mainly by Steps 2 and 4

Methodology & Sourcing

Step titles, composite scores, tiers, and risk framing are pulled from the AI Augmentation Analysis (analysis/AI_augmentation_analysis.pdf) and the Opportunity Matrix (deliverables/opportunity_matrix.xlsx). Tool selections and vendor functions are the reference technologies for each step and were researched separately for this table.

Pilot-cost figures for Jumio, Nitrogen, eMoney, Orion, and Salesforce were researched separately (published vendor pricing pages and third-party pricing-intelligence sources, current as of October 2026) because the AI Augmentation Analysis does not include pricing. Docupace has no published pricing anywhere located; its "custom quote" figure is carried through unchanged rather than estimated.

Advisor and client time-savings figures extend the per-step automation-feasibility scores and vendor case-study benchmarks cited in the project (e.g., 80–90% manual-review reduction for KYC; 60–80% NIGO reduction for account setup) against typical task durations from the Intelliflo 2024 Advice Efficiency Survey and the project's process narrative. These are directional planning estimates, not measured results.

"Est. Days Saved on Full Onboarding" is a separate cycle-time (elapsed calendar time) estimate, not a unit conversion of the minutes columns — it reflects reductions in rework loops and wait time (e.g., the NIGO correction cycle, repeat KYC document requests) rather than labor time alone. Steps without a meaningful rework/waiting component (1 and, to a lesser extent, 3) show minimal or no days-saved impact even though they save advisor and client minutes. Because the process narrative describes Steps 1–7 as a largely sequential pipeline, the combined figure sums the per-step ranges rather than assuming parallel execution.
